

HuskiesPaws

Turn everyday walks into a creature-collecting adventure.

BigRed//Hacks 2026 · Navigation · the phone app

Luis Mendez

Abdullah Rashid

Built with Cursor

Maps get you there. They do not make you look.

1

Shortest path

Navigation ends at the pin.

2

Phone away

The walk itself is leftover time.

3

Missed places

Campus already has stories. Nothing asks you to notice.

No fake statistics. Walking already happens. Discovery does not.

Explore → Walk → Discover → Collect

Explore

Pip

Scouts a nearby place with Wikipedia and OSM.

Walk

Fern

Guides the route. The trail blooms.

Discover

Moss

Tells the grounded story.

Collect

You

Capture the landmark. Eggs fill as you walk.

Pip, Fern, and Moss — original art from the app.

Keep this slide up. Hand them the phone.

Demo Walk is ON · steps are simulated at the table

Choose a place

3

Start a walk

4

Capture

Follow these four taps on the phone.

Hide the Expo tools button. If voice is slow, keep going.

A phone, a small API, the real world

- Facts and routes come from tools, not the model.
- Photon carries the same squad into iMessage.
- Designed and iterated in Cursor.

Walking becomes play

The map is a trail

A blooming path and a squad, not only a blue line.

Steps earn creatures

Eggs, ranks, and captures — completable in Demo Walk.

It continues in iMessage

Same squad over Photon. Terminal today; iMessage with keys.

Working · ISS overhead can boost rare hatches.

Later · live Grok without a key, cloud deploy, background tracking.

Everyday walks. Extraordinary company.

Campus, hometown blocks, the path between classes — same loop.

Planned next — not shipped

Background tracking

Honest walks with the phone in a pocket.

A deploy that stays awake

Grok and turf up for a whole event.

Richer social exploration

Shared landmarks without a grind.

Try it on the phone. Ask us anything.
