

HuskiesPaws

Turn everyday walks into a creature-collecting adventure.

BigRed//Hacks 2026 · Theme: Navigation

Luis Mendez · Abdullah Rashid

Phone app · Expo Go · Built with Cursor

People walk past the interesting places

Typical navigation

Get there as fast as possible

Stay on the shortest path

Put the phone away at the door

What walking could be

Notice the route, not only the pin

Named places with real stories

Walking earns progress and company

Explore → Walk → Discover → Collect

1

Explore

Pip scouts nearby places from Wikipedia and OpenStreetMap.

2

Walk

Fern guides the route. The trail blooms as you move.

3

Discover

Moss tells the grounded story at a real landmark.

4

Collect

Capture the place. Walking fills eggs and grows the squad.

Pip

Scout

Finds a nearby place and a fact from tools, not guesswork.

Moss

Storyteller

Reads the landmark's history in a short voice memo.

Fern

Pathfinder

Turns that place into a walk you can follow.

Live demo — keep this slide up

Demo Walk is ON · steps are simulated at the judging table

1

Send Pip exploring

Squad → Pip → Explore. A nearby place and a fact come back.

2

Choose a place

Open the postcard. That is the landmark for this walk.

3

Start a walk

Fern leads. The trail blooms on the map as Demo Walk runs.

4

Capture

When you arrive, capture the landmark or hatch from the walk.

How we built it

Phone

Expo SDK 57
React Native
Expo Router

API

Node.js /api
Secrets stay here
Turf + voice + art

World

Wikipedia · OSM
Grok / ElevenLabs
Photon iMessage

Shared JavaScript game logic

core/ is the source of truth. Phone, server, and iMessage import the same rules.

Grounded facts and routes

Place facts from Wikipedia. Walking routes from OpenStreetMap. Agents do not invent landmarks.

Voice and art, with fallbacks

Moss can use ElevenLabs. Pip and Fern can use Grok when keys are set. Else on-device speech and original art.

Cursor-assisted build

SpaceX track: designed and iterated in Cursor. iMessage agent uses Photon Spectrum.

What makes it special

Navigation becomes play

The map is a blooming trail and a squad, not only a blue line to a pin.

Walking earns pets

Distance fills eggs, ranks, and landmark captures — completable at the table in Demo Walk.

Lives in iMessage

The same squad can explore, story, and route over Photon — terminal today, iMessage with keys.

In the app: ISS overhead can boost rare hatches.

Not claimed today: live Grok without a key, cloud deploy, background tracking.

Walk more of the world you already live in

Campus, hometown blocks, and the path between classes — same loop.

What's next · planned, not shipped

Background tracking

Keep the walk honest when the phone is in a pocket.

Accessibility

Clearer motion, voice, and contrast for more walkers.

Reliable deploy

Wake the API so Grok and turf stay up for a whole event.

Social exploration

Richer shared landmarks without turning it into a grind.

Everyday walks. Extraordinary company.

Try it on the phone. Ask us anything.
