

HuskiesPaws

Turn everyday walks into a creature-collecting adventure.

BigRed//Hacks 2026 · Theme: Navigation

Luis Mendez · Abdullah Rashid

Phone app · Expo Go demo · Built with Cursor

People walk past the interesting places

Typical navigation

Get there fast.

Stay on the shortest path.

Put the phone away at the door.

Little reason to look around on the way.

What walking could be

Campus and neighborhoods are full of named places with real stories.

Walking is already happening. Discovery and progress are not.

Explore → Walk → Discover → Collect

1

Explore

Pip scouts nearby places from Wikipedia and OpenStreetMap.

2

Walk

Fern guides the route. The trail blooms as you move — or in labeled demo walk.

3

Discover

Moss tells the grounded story. You arrive at a real landmark.

4

Collect

Capture the place. Walking fills eggs and grows your squad.

Pip

Scout

Finds a nearby place and a fact from tools, not guesswork.

Moss

Storyteller

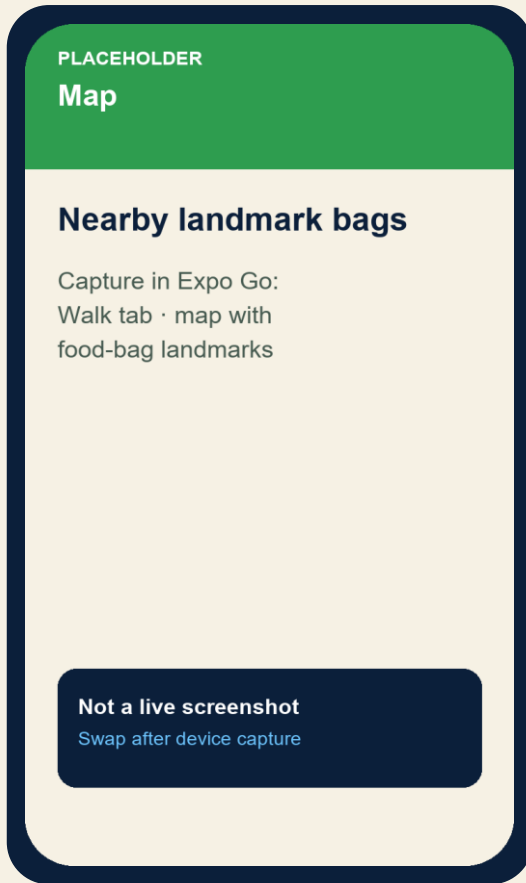

Reads the landmark's history in a short voice memo.

Fern

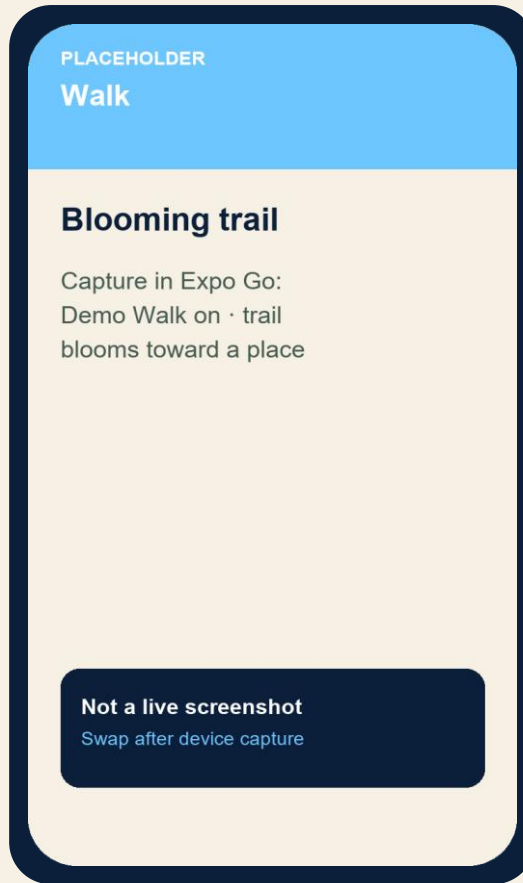

Pathfinder

Turns that place into a walk you can follow.

Nearby landmark

Walk / trail · Demo Walk

Capture / pet reward

Sequence: Send Pip exploring → choose a place → start a walk → capture. Demo Walk simulates steps at the table.

How we built it

Phone

Expo SDK 57
React Native
Expo Router

API

Node.js /api
Secrets stay here
Turf + voice + art

World

Wikipedia · OSM
Grok / ElevenLabs
Photon iMessage

Shared JavaScript game logic

core/ is the source of truth. Phone, server, and iMessage import the same rules.

Grounded facts and routes

Place facts come from Wikipedia. Walking routes come from OpenStreetMap. Agents do not invent landmarks.

Voice and art, with fallbacks

Moss can use ElevenLabs. Pip and Fern can use Grok Voice and Imagine when keys are set. Otherwise on-device speech and original SVG art.

Cursor-assisted build

SpaceX track: designed and iterated in Cursor. iMessage agent uses Photon Spectrum.

What makes it special

Navigation becomes play

The map is a blooming trail and a squad, not only a blue line to a pin.

Walking earns creatures

Distance fills eggs, ranks, and landmark captures you can actually complete at the table in Demo Walk.

The walk continues in iMessage

The same squad can explore, story, and route over Photon Spectrum — terminal today, iMessage with keys.

Also in the app: ISS overhead can boost rare hatches. Experiments, not claims: live Grok without a key, cloud deploy, background tracking.

Walk more of the world you already live in

Campus, hometown blocks, and the path between classes — same loop.

Background tracking

Keep the walk honest when the phone is in a pocket.

Accessibility

Clearer motion, voice, and contrast for more walkers.

Reliable deploy

Wake the API so Grok and turf stay up for a whole event.

Social exploration

Richer shared landmarks without turning it into a grind.

Everyday walks. Extraordinary company.

Try it on the phone. Ask us anything.
